Overview

Prankraft is a front-end web design competition inspired by the spirit of April Fool, focusing on creating **interactive, deceptive, and engaging web interfaces**.

Participants are expected to combine creativity with technical implementation to design experiences that surprise and cleverly challenge user expectations.

Competition Requirements

1. Participants must **design and develop responsive web interfaces**
2. Submissions must be **fully functional front-end implementations**
3. The design should include a **creative, playful, or deceptive interaction element** (non-harmful and user-safe)

Technical Guidelines

- Any **front-end technologies** may be used:
  - HTML, CSS, JavaScript

    - Frameworks/libraries (React, Vue, Tailwind, Bootstrap, etc.)
- Websites must be:
    - **Responsive** (mobile + desktop compatible)
    - **Interactive and user-friendly**
- Deployment is recommended (GitHub Pages, Netlify, etc.)

❌ **Not Allowed:**

- Static design submissions (Figma, Canva, images, PDFs, etc.)
- Purely template-based submissions without meaningful customization
- Backend-heavy implementations (focus must remain on front-end experience)

AI Usage Policy

Participants may use AI tools for:

- Idea generation
- Code assistance
- Debugging and learning support

However:

- Submissions must demonstrate **clear understanding and meaningful customization**
- Fully auto-generated solutions with minimal participant contribution will not be considered
- Participants should be able to **explain their implementation if required**

Evaluation Criteria

I. 🎭 Creativity & Concept

- **Originality of idea**
- **How effectively the design plays with user expectations**

II. 🎭 Deceptive/Surprise Element

- **Cleverness of the twist**
- **Engagement and uniqueness of interaction**
- **Should be fun, non-harmful, and user-friendly**

III. 🎨 UI/UX & Design Quality

- **Visual appeal**
- **Layout, typography, and consistency**
- **Overall user experience**

IV. 💻 Technical Implementation

- **Code quality and structure**
- **Responsiveness across devices**
- **Smooth functionality and performance**

Submission Guidelines

Participants must submit:

- 🔗 Live website link *(preferred)* or working project link
- 📂 Source code (GitHub repository / ZIP file)
- 📝 Short description (max 150 words) explaining:

- Concept
- Deceptive/creative element used

Rules & Ethics to be followed :

- **Plagiarism will lead to immediate disqualification**
- **All content must be original or properly credited**
- **Designs must not be offensive, harmful, or misleading in a negative way**
- **Judges' decision will be final**

This is a front-end web design competition, not a static design contest

Focus on experience + implementation, not just appearance

ALL THE BEST
